What do you find good/bad in this mock-up? What would you improve?

What would you change?

I find it good in this mock-up because the mock-up gives me a good time coding and refreshes my memory in my HTML and CSS knowledge. And, I like the design of the mockup since it is fairly simple and clear for the user. However, there were some spots that cannot be completed exactly the same as the image due to the problem with the grid system in Boostrap. For example, for the cards in the awards section, it's hard to make the position of the cards higher than the others since the restrictions of the grid system. Rather than put them in the same row, I might put 2 cards in the same row and 3 cards in the other row. Other than that, everything is good.
